

ASR Sinewave Regenerator

Customer Testimonials

“I am absolutely delighted with the CVT I purchased recently and in my opinion it is as good as the PS Audio ‘Mains Regenerator’ which retails at almost £3000!! I have tried Isotek cubes up to 2KVA and various mains (so called) ‘conditioners’/‘filters’ and this is far superior at about half the cost of the ‘cube’.”

“The first thing I noticed with the sound quality was the soundstage. The perceived depth was significantly better. Instruments, (recording permitting), appeared to have greater front to back depth. Sound sources (like instruments like drums and cymbals) could be more easily picked out from the recording mix. When the recording allowed there was the illusion that the music spread beyond the L/R speakers and room boundaries.”

“The CVT made significant improvements to my hifi system. This was more remarkable in that I already have RF noise reduction products installed on my system in the form of ferrite + shielded mains wiring, isolation transformer and a dedicated consumer unit. At this price point the CVT is quite a competitive product.”

“The first major improvement was the noise level at high volume with no input, the silence is deafening!”

“The overall sound was more relaxed and musical, attack was more powerful and notes seemed to last longer. I experienced a much higher level of detail, particularly in the higher frequency range. The highs were also sweeter and more tuneful, without the harshness or 'glare' of before. More 'space' around instruments and vocals gave a 'live' experience, to the degree that you could 'hear' the room in which the recording was made.”

“The difference was immediately apparent and startling. Dynamically, the system had grown much larger and more powerful; the soundstage solid and tangible, front to back, left to right and vertically the precision now resolved pinpoint sharp. And the noise floor was way down; I think the two are intimately linked.”

“It’s like having your whole CD collection re-mastered. A superb product and for the cost it’s the single biggest improvement I can envisage being made to a system.”

“I have to say that the picture on my TV (Toshiba 32W6DB) has always been very good but the use of your CVT has made quite a dramatic difference not only to the picture but also to the quality of the sound.”

“Just to let you know how really impressed I am with the sinewave regenerator ASR 100UK that I recently had on trial and subsequently bought from you.”

“The improvement when using your unit was immediately apparent. The music is clearer and more focused, but the sound staging is also much improved. This is an amazing bit of kit and could easily sell for over twice the price.”

“Thank you very much for the time we spent on Friday on the power units. I have done some very brief testing, both in my own factory and at a local high-end hifi retailer. The constant voltage transformer delivers excellent results with a very noticeable improvement in sound quality over the high performance isolation device the retailer normally uses.”
